## Care Sheet Maidenhair tree - Ginkgo biloba

Origin: China

### General info

Deciduous tree grows to 75'. Hardiness zone 3-8a

### Over Wintering

Keep outdoors during winter months so that they can experience a dormancy or rest period. During this period, your bonsai should be protected from drying winds and extreme cold conditions.

This can be achieved by utilizing cold frames, window wells, enclosed unheated rooms, shed or garage with windows, or mulched beds. The bonsai should be checked regularly for water when temps are above freezing. Roots have high moisture content and must be protected

### Lighting

Full sun to part shade in leaf. After leaf drop can be kept in dark cool storage

### Watering

Water when soil starts to dry on top. When you water make sure you completely wet all the soil in the pot every time you water. Don't pour in a little water every day

### Feeding

Spring thru early fall. You can use house plant or nursery fertilizers. Follow the label for rates and application times.

### Training

Shaping is done by pruning

### Repotting

Every 2-3 years with root pruning
